### Description:

The Sepor Pulp Density Scale is a versatile instrument that is irreplaceable whether in the laboratory or in the field. It is suspended from a 2 1/2" diameter support ring used for hanging the scale freely in space. It can be used to determine the specific gravity of dry solids or pulps as well as the percent solids of slurries.

It comes with as set of 12 dial faces for solids with specific gravities from 1.2 to 7.8.

The standard set comes with the scale, a set of 12 dial faces and a plastic 1,000 mL container. Stainless Steel containers are available upon request.
