Description:

The Sepor Auto magnet is a compact, sealed aluminum canister housing a powerful Alnico V-six pole permanent magnet. It utilizes a simple spring-loaded plunger mechanism to extract magnetic material from one container and discharge to another. Depress the plunger to bring the magnet in contact with the base and pick up magnetic material, move the magnet to the disposal point and release the plunger, allowing the magnet to move away from the base releasing the magnetic items. The magnet is housed in a lightweight case of .040" aluminum that can be partially immersed in liquid.
