Description:

Sepor's 3' diameter by 5' long Ball Mill is constructed of A 36 steel with feed discharge ports that are blind flanged 180 degrees from each other. The mill has removable steel grates on the discharge ports to retain the grinding media and allow for the discharge of material. Optionally, Sepor can provide a ball retainer screen box.

The mill comes standard with heavy duty bearings, full set of V- belts, a 15 HP/380V/3ph/50Hz or 220V/3ph/60Hz motor with motor mount and gear box. The mill employs an electrical drive that allows for soft start and jogs on a dedicated electrical control panel and includes a mill rotation counter. The unit is mounted on a heavy duty welded steel frame and is supplied with a complete set of safety guards. The barrel liner is custom tailored to the client's needs – vulcanized smooth rubber lining, rubber lined with lifters or steel lined.

The grinding media is purchased separately.

Sepor also manufactures a 4' x 6' model of this mill if a larger unit is required.
